Another “quick” application developed for the County’s Department of Recreation and Parks to verify recreation program registrants’ County residency (non-county residents pay a higher fee for some recreation programs). This application can be used by any staff to easily verify that the applicant has given a valid address and if they are the homeowner or rent from the homeowner.

This application uses an ArcMap Image Service created from an ArcMap document which utilizes standardized “layer” themes, which have defined symbology and labeling. Therefore, the application could be created and deployed in a matter of minutes.
